In cooperation with:

INNOVATIVE SOLUTIONS FOR OPERATING THEATRES

With a PACS system for the modern management of patient picture data in clinics and hospitals, digitally created picture data can be made available directly, without time delay and in several places at the same time to a high level of quality. Particularly sensitive areas such as operating theatres require special solutions which comply with the regulations concerning hygiene and technical safety.

Our product development is oriented to the wants and needs of the customer. Innovation, high quality, flexibility and the exceptional dedication of our employees make it possible to prepare optimal and efficient solutions in a very short time. Construction and design is in the hands of highly qualified and experienced engineers.

The highly varied product range of the S-CAPE® medical technology is based on the specific requirements of the differing surgical operating departments. As part of the progressive digitalisation of the imaging procedure in medicine, combinations of analogue and digital technology and arrangements of differing types of monitor are now possible.

All over the world, many operating theatres have already been equipped with the »medical multiconsole«, the co-operation product developed by S-CAPE® GmbH and Gerätebau (apparatus engineering) Felix Schulte GmbH & Co. KG. In this co-operation, experience from more than 50 years of development and production of PLANILUX® film viewing systems comes together with the high calibre know how of S-CAPE® GmbH, who have been offering current and efficient technologies as well as a comprehensive support service as Intel® partners for more than 15 years.

medical multiconsole

The S-CAPE® | PLANILUX® image viewing system is a brand new combination of optionally conventional and digital image viewing. It allows for the entry of high IT performance into sensitive medical areas. The construction depth of only 10.5 cm allows for a problem-free exchange of available analogue image viewers with the S-CAPE® | PLANILUX® units. Through complete integration into the wall, along with a not inconsiderable cost advantage, the space saving modernisation of the operating theatre itself is also possible.

Expansion to include diverse peripheral devices or a connection to these (e.g. external monitors) is also generally guaranteed.

EXPLANATION OF S-CAPE® SYSTEMS NOMENCLATURE:

- D1/D2/D3** - Indicates the number of digital screens
- A40/A80** - Indicates the size of analogue viewing area
- UP** - in-wall version (bi)
- AP** - on-wall version (wm)
- VR** - covering frame for flush installation of in-wall systems
- S** - Indicates a special solution, apart from standard product range
- mob** - Identification mark for mobile solutions
